Title: Deliverable D1.9 Report from the 8th Workshop in Dar es Salaam, Tanzania	Document Version: 1.0

Project Number: 261584	Project Acronym: 6DEPLOY-2	Project Title: IPv6 Deployment Support

Contractual Delivery Date: 31/3/2012	Actual Delivery Date: 05/02/2012	Deliverable Type* - Security**: R – PU

*   Type: P – Prototype, R – Report, D – Demonstrator, O – Other

** Security Class: PU- Public, PP – Restricted to other programme participants (including the Commission Services), RE – Restricted to a group defined by the consortium (including the Commission Services), CO – Confidential, only for members of the consortium (including the Commission Services)

Responsible and Editor/Author: Mukom Akong Tamon	Organization: AfriNIC Ltd	Contributing WP: WP1

Authors (organisations):

Mukom Akong Tamon, AfriNIC Ltd

Abstract:

This deliverable presents a report from the workshop held in Dar es Salaam, Tanzania from the 5th - 6th June, 2011. The presentation material is listed, the attendees and their affiliations are given, and the opportunities for further co-operation and follow-up actions are described.

Keywords:

IPv6, Support, Training, Testbeds, Modules, 6DISS, 6DEPLOY, 6DEPLOY-2, Hands-on exercises

Disclaimer

The 6DEPLOY-2 project (number 261584) is co-funded by the European Commission under the Framework Programme 7. This document contains material that is the copyright of certain 6DEPLOY-2 beneficiaries and the EC, and that may not be reproduced or copied without permission. The information herein does not necessarily express the opinion of the EC.

The EC is not responsible for any use that might be made of data appearing herein. The 6DEPLOY-2 beneficiaries do not warrant that the information contained herein is capable of use, or that use of the information is free from risk, and so do not accept liability for loss or damage suffered by any person using this information.

Executive Summary

One of the main activities in the 6DEPLOY-2 project is to organise workshops to train the different Internet communities in the areas of IPv6 deployment, configuration, and usage. This project is a follow up of previous project activities within and outside the Framework Programmes of the European Commission.

This deliverable presents a report from the workshop held in Dar es Salaam (Tanzania) from the 5th – 6th June, 2011. The following workshop details are described in this report: a) the workshop attendees and their affiliations, b) the programme outline, c) the material presented, d) hands-on exercises, e) an assessment of the opportunities for further co-operation, and f) An analysis of the feedback questionnaires from the participants.

1. INTRODUCTION

1.1 6DEPLOY-2 Objectives

The following comprise the 6DEPLOY-2 objectives:

- to support the deployment of IPv6, in Europe and developing regions

- to sustain the wealth of 6DEPLOY training material (e-learning package with subtitles in national languages, presentation material, exercises, etc.)

- to create a catalyst of global IPv6 expertise through the installation of strategically-placed sustainable IPv6 training labs

- to synchronise with the training schedules of AfriNIC and LACNIC (and also APNIC) to exploit training opportunities cost effectively in Africa, Latin America and Asia

- to revive the IPv6 Cluster

- to describe deployment examples on the project Website

- to exploit the expertise and high quality training material from 6DEPLOY, including presentations, the e-learning course and the available IPv6 Labs, and - whilst continuing to offer professional training to organisations in Europe and developing countries - focus on supporting real deployments

- to maintain and update the 6DEPLOY material and include new training media, and multiply its training effectiveness through courses which educate other trainers about the basics of IPv6, so that they can teach others ("training trainers")

- to extend to global scale the IPv6 Labs. Sustainability is achieved initially through the careful selection of locations for the installations (e.g. within NRENs) where the connectivity, funding and qualified staff support are all secured

- to support the (human) networking between the Lab managers with regular workshops.

One of the main activities in the 6DEPLOY-2 project is therefore to organise workshops to train the different Internet communities in the areas of IPv6 deployment, configuration, operation, and management. This activity is a follow up of previous project's activities within and outside the Framework Programmes of the European Commission.

1.2 6DEPLOY-2 Workshop Methodology

The 6DEPLOY-2 methodology relating to the workshops is shown in the diagram below:

Figure 1-1: 6DEPLOY-2 methodology (diagrammatically)

The approach is to use course material available from 6DEPLOY and elsewhere that relates to IPv6, the e-learning course, and the 6NET IPv6 Deployment Guide book, together which will form the basis of the training material. This training material is supplemented with knowledge from partners' participation in events such as IPv6 Forum meetings, IPv6 Task Force meetings, Internet2 meetings, and the IETF, and from the experience of similar activities brought to the project by the representatives of the Internet Registries in North and South America, the Asia-Pacific region, Africa, and Europe. The knowledge is disseminated through training sessions that, for practical reasons, are often held in conjunction with AfriNIC, LACNIC, APNIC, AfNOG, APRICOT, and ISOC meetings.

After each workshop, feedback reports are collected from the participants, enabling 6DEPLOY-2 to assess the impact of the presentations and to identify any areas that need improvement.

The full set of dissemination materials (including the e-learning course and 2 managed testbeds) is available from 6DEPLOY and partners´ own sources. This includes presentation slides on all issues of Internet deployment and evolution; especially IPv4-IPv6 transition strategies, DNS, DHCP, routing, QoS, MobileIP, multicast, renumbering, auto-configuration, security, monitoring and management tools, and applications. This material was described in the deliverable D1.1.1: "Report of the available training material and the assignment of partners responsible for maintaining each item".

This deliverable presents a report from the workshop held in Dar es Salaam (Tanzania) from the 5th – 6th June, 2011. The workshop comprised both slide presentations and hands-on exercises using remote testbeds.

Chapter 2 of this document explains the general motivation for running IPv6 workshops, and chapter 3 describes the specific details of this workshop, in terms of the attendees, the modules that were presented, and the "hands-on" exercises that were performed. Chapter 4

identifies opportunities for further collaboration in the region and follow up actions, Chapter 5 summarises the analysis of the feedback questionnaires that were filled in by the participants, and Chapter 6 provides some general conclusions.

2. THE WORKSHOPS (GENERAL)

Workshops are one of the main mechanisms used by 6DEPLOY-2 to transfer information and to build collaboration.

6DEPLOY-2 is structured to provide an ideal platform for the discussion of deployment scenarios and the exchange of best practices, thereby avoiding duplication of effort, by preventing the waste of time on techniques that are known not to have been deprecated, and generally making the most efficient use of the available resources in a region. Partners in 6DEPLOY-2 have deployed IPv6 on a production basis in their own NRENs and University networks, and have documented their experiences in Cookbooks and in IETF informational/best common practice RFCs. The manufacturer in the consortium is building IPv6 products.

The workshops are not only intended to lead to an improved quality of the Internet infrastructure in developing countries, but will also raise the competence of the attendees and, in exploiting the personal contacts made through 6DEPLOY-2, facilitate and encourage the participation of their organisations in future FP7 calls and beyond.

Impacts from the workshops will include:

- A positive effect towards preventing the "brain drain" from developing countries by bringing interesting and state-of-the-art activities into these regions, thus making information and knowledge resources accessible to scholars both locally and globally;

- An expansion of the conditions for growth by enabling the exchange of ideas, launching joint experiments and projects, disseminating RTD results, and activating market forces; all of which are substantial elements in the process of regional development;

- Making European research and industrial concerns aware of the highly skilled personnel who can contribute to the urgently needed improvement of ICT infrastructures, resulting in an increase of the demand for specialized services provided by the highly skilled academics and researchers of the region; and

- The identification of IPv6 deployment activities in the region and an exchange of information about deployment experiences.

While IPv6 standards and services are quite stable, regional variations in practices and operations will require slightly different approaches for collaboration and dissemination. Therefore, the material for these workshops was collected, and the workshop schedules,

formats, and contents were tailored in conjunction with the local organisers so as to suit the type of participants, the subjects to be addressed, the location, the host organisation, the sponsors, etc.

3.   THE 6DEPLOY-2 WORKSHOP IN DAR ES SALAAM (TANZANIA)

This IPv6 Workshop was held in Dar es Salaam (Tanzania) from the 5th – 6th June, 2011. In the following paragraphs we provide information about the workshop, including the programme outline, and the material that was presented.

3.1 Overview

Mukom Akong Tamon from AfriNIC and Phil Smith from Cisco taught the workshop with some assistance for the hands-on exercises from Madvi Gokhool of AfriNIC.

The course started with a brief overview of the problem i.e. IPv4 address exhaustion. After sharing the statistics and projections for RIR run out dates, the options for dealing with the problem were presented; namely, NAT and IPv6.

The next session dissected the problems inherent with NAT-based approaches and showed clearly that NAT is not a sustainable solution to the problem of IPv4 address exhaustion. Thus IPv6 was left as the only alternative to the continued growth of the Internet.

The fundamentals of IPv6 were then taught, starting with basic addressing, drawing parallels of equivalent IPv6 protocols to the basic functionality protocols that engineers use today with IPv4, IPv6 sub-netting and address planning, basic routing and transition techniques. The session ended with hands-on exercises in which the participants practised taking an IPv6 prefix, breaking it up and allocating it to the testbed and then proceeding to configure a full dual-stacked network (addressing, routing) and then implemented transition techniques (manual and 6to4 tunnelling).

3.2 Attendees

	Full Name	Organisation	Country
1	Abibu Ntahigiye	tzNIC	Tanzania
2	Anwar Ahmed	PWANI Telecoms	Kenya
3	Aryg Abdalla	National Telecommunications Corp.	Sudan
4	Hassan Warsama	National Telecommunications Corp.	Sudan
5	Kentse Kebinakgabo	University of Botswana	Botswana
6	Khamis Bakar	Zantel	Tanzania
7	Mam Dawda Gai	Gamtel	Gambia
8	Ngnoulaye Janvier	Ins. de la Gouv. Num. Universitaire	Cameroon
9	Peter N. Ben	Ministry of Posts & Telecoms	Liberia

10	Stephen Okoye	SimbaNET	Nigeria
11	Trilok Dabeesing	ICTA	Mauritius
12	Visham Luckwa	ICTA	Mauritius
13	Yassir	Hassan	Sudan
14	Barry Apudo Macharia	KIXP/TESPOK	Kenya
15	William Kimoli Ngava	MTN Business	Kenya
16	Hobson Kayima	Post Bank	Uganda
17	Mwandu Mwelwa	Africonnect	Zambia
18	Emille Urbain Milandou	ARPCE	Congo
19	Perez Matsiko	Uganda Christian Univeristy	Uganda
20	Yassir Hassan Elamin Hassan	Sudanese Universities Information Network	Sudan
21	Hussein Yunus Nganga	Zantel	Sudan
22	Ismael Settenda	Habari Node Ltd	Tanzania
23	Gabriel Ali	MACRA	Malawi
24	Kwame Saidi Ayoob	Zantel	Tanzania
25	Hezron Mwangi Murugi	Kenya Education Network	Kenya
26	Eliphas Tongora	DIT	Tanzania
27	Ombeni Elifadhili Mnzava	DIT	Tanzania
28	Nelson Swazi Jacob	Vodacom Ltd	Tanzania
29	Jackson M. Shao	Vodacom Ltd	Tanzania
30	Guebre Moussa	Ministry of ICT	Burkina Faso
31	Traore Alione Badara	SOTELMA	Mali
32	Mativenga Memory	Midlands State University	Zimbabwe
33	Azeez Faisal	University of Lagos	Nigeria
34	Mastula Kyongo	Post Bank	Uganda
35	Nicholas Jatta	Public Utilities Regulatory Agency (PURA)	Gambia

Table 3-1: Dar es Salaam (Tanzania) attendance list

The participants represented a wide range of the ICT community from different countries in Africa, the majority of whom described themselves as IT Managers.

3.3 Workshop programme

The agenda was agreed on after close collaboration with the local organisers. The meeting agenda and the related material were submitted in advance so that the local organisers could decide which topics should be prioritised and so manage the logistics accordingly. The programme of the workshop is presented in the following table:

Date	Modules and Topics Covered
05/06/2011	[a] Why NAT is not a sustainable solution to the problem of IPv4 address exhaustion [b] IPv6 Addressing • Address notation, shortening rules and examples • Address types and scopes [c] IPv6 Address Planning • Sub-netting in IPv6 (reasons, procedure with sipcalc and examples + exercise) • About nibble boundaries • Address planning worked example and class exercise [d] IPv6 from an IPv4 Perspective • IPv6 packet structure (schematic and live packet capture) • IPv6 and IPv4 packets compared and contrasted • IPv6 compared to IPv4 with respect to Network access layer, automatic IP host configuration options, Link-layer address resolution, FQDN to IP address resolution, host to router multicast membership protocols, automatic default gateway configuration, routing, minimum MTU size and sending packets to all nodes • Neighbour Discovery – features, mechanism plus live packet analysis • Host configuration (Windows and Linux) – class exercise • SLAAC – theory, advantages and disadvantages over DHCPv4, configuration example and packet analysis • DHCPv6 – how it works, difference from DHCPv4 • Exercise: IPv6 ping sweep, and neighbour cache and mac address discovery [e] IPv6 Routing (static, OSPFv3 theory and configuration examples)
05/06/2011	[f] Transition Techniques • Understanding the need and use cases for transition techniques • Dual stack - overview, 'how it works' and configuration examples • Manual tunnels - overview, 'how it works' and configuration examples • 6to4 - overview, 'how it works' and configuration examples • NAT64 - overview, 'how it works' and configuration examples [g] Hands-on Labs (using testbeds) • Sub-netting an IPv6 allocation and assigning subnets to links of lab network • Configuring, testing and troubleshooting IPv6 addresses • Configuring, testing and troubleshooting static routing • Configuring, testing and troubleshooting OSPFv3 routing • Configuring, testing and troubleshooting manual tunnels • Configuring, testing and troubleshooting 6to4 tunnels

Table 3-2: Dar es Salaam (Tanzania) Workshop programme

3.4 Presentation material

The following material was presented:

Modules	Presented by	Affiliation
IPv6 Introduction, IPv6 Addressing, Transition and coexistence.	Mukom Akong T.	AfriNIC
Addressing Practice: Subnetting	Mukom Akong T.	AfriNIC
IPv6 Routing	Philip Smith	Cisco
IPv6 Security Overview	Phillip Smith	Cisco
Hands –on labs	Mukom Akong T. Madvi Gokhool	AfriNIC

Table 3-3: Dar es Salaam (Tanzania) Workshop list of modules used

The class was divided into 18 groups and each group was assigned to one of the routers in the AfriNIC, RENATER and Consulintel testbeds. Each group was given a printed copy of the lab manual that details the objectives of the exercises to be performed with step by step instructions as well as all required supporting information. The trainers supervised the exercises, making clarifications and explanations when required.

4. OPPORTUNITIES FOR FURTHER CO-OPERATION

The links to the 6DEPLOY-2 materials were given to the participants. They were also told and shown how to book any of the labs in the 6DEPLOY-2 project to practise on their own, either using the provided lab manual or for their own scenarios.

# 5. ANALYSIS OF THE FEEDBACK QUESTIONNAIRES

1. Characterisation of the participants

63% of the respondents reported themselves to be from organisations that were AfriNIC members and the remaining 37% were from non-member organisations that were planning to become members.

|	
(Q1a) Member	12
(Q1b) Non Member (planning to be soon)	7
(Q1c) Non Member (no plans to be)	0
No answer	0
2. Internet number resources being used at participant's organisations

While 64% of the respondents reported they were using IPv4 resources, 11% and 21% reported that they were using IPv6 and ASNs respectively.

|	
(Q2a) IPv4	18
(Q2b) IPv6	3
(Q2c) ASNs	6
(Q2d) None	0
(Q2e) Don't know	1
3. Pre-workshop knowledge and skills

63% of the respondents reported that they had basic IPv6 skills prior to the workshop and 32% reported they had intermediate level IPv6 knowledge and skills. Five percent (5%) of the participants had however never heard about IPv6.

| (Q3a) None (Never heard of IPv6)	1
(Q3b) Basic (I can configure IPv6 on my Operating System)	12
(Q3c) Intermediate (I can configure IPv6 intra-domain routing)	6
(Q3d) Advanced (I operate an IPv6 network - intra+inter-domain routing & services)	0
(Q2e) No answer	0

4. Primary role in the organisation

IT Managers were the most represented role in attendance at 37%, followed by network engineers at 21% then systems administrators and network technicians at 16% each.

| (Q4a) IT Manager	7
(Q4b) Network Engineer/Architect	4
(Q4c) Systems Administrator	3
(Q4d) Network Technician/Support	3
(Q4e) Other	2
No answer	0

5. Primary industry of the organisations present

The most represented industries were Internet Service Providers and Educational institutions at 37% and 32% respectively. The Finance and Mobile Telecoms sectors were the least represented at 5% each.

|		
(Q5a) Internet Service Provider	7	
(Q5b) Mobile Telecommunications	1	
(Q5c) Government Agency/Institute	2	
(Q5d) University/Higher Education	6	
(Q5e) IT Training Institute	0	
(Q5d) Finance/Banking	1	
(Q5f) Other	2	
No answer	0	

6. Reasons for attending the workshop

The most important reasons participants gave for attending the workshop were in the following order: (1) learn the fundamentals (74%), (2) understand the strategic issues around IPv6 (68%) and (3) learn/share the IPv6 experiences of others (68%).
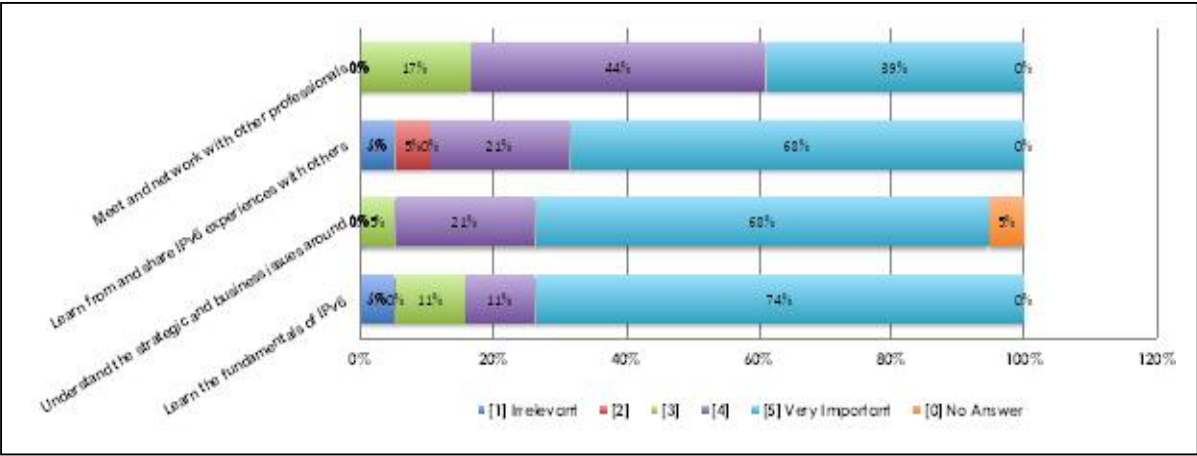

7. Implementation status of related technologies

While at least 11% of the respondents said they had operational core networks with public IPv6 services and connectivity to the global Internet, the vast majority didn't seem to have any kind of IPv6 plan (78% for example had no response for getting IPv6 connectivity to the Internet). At least 11% were in the planning stages for IPv6 deployment.

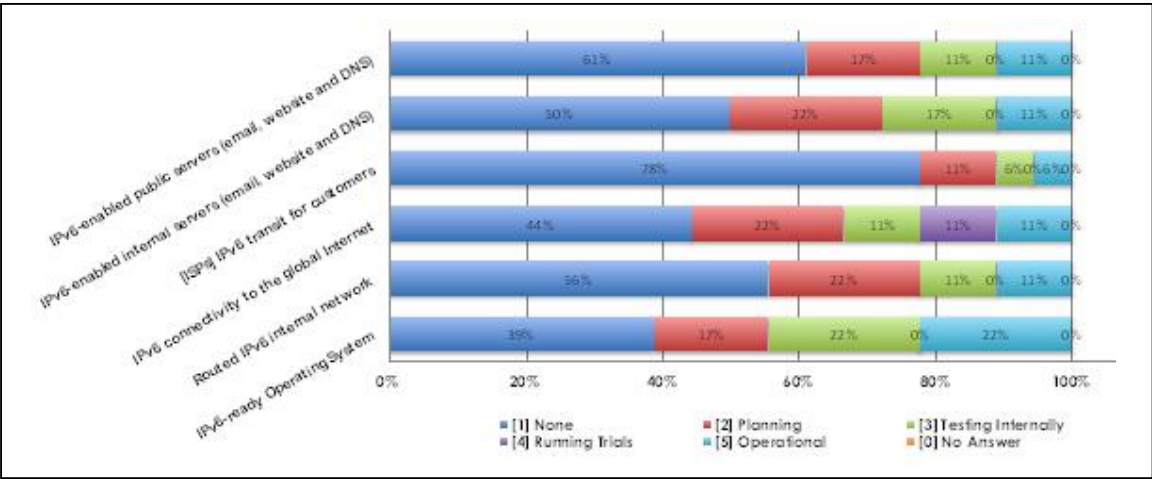

8. The effectiveness of workshop design

The majority of respondents (88%) agreed or strongly agreed (44% each) that the workshop objectives were clear and unambiguous. 82% agreed or strongly agreed that there was a right balance between theory and practice. 73% agreed that the curriculum was relevant to their job functions. 88% agreed that the workshop lived up to their expectations and 89% will highly recommend the workshop to friends and colleagues (6% strongly disagreed about recommending this to their colleagues). 6% however would like to see more time allocated to hands-on exercises.
9. Post-workshop knowledge and skills

At least 44% of respondents reported confidence at configuring, testing and troubleshooting a dual-stacked network as well as tunnels. 56% were confident in their ability to develop an IPv6 address plan for their organisations. Compared to the 32% who reported being able to configure intra-domain routing before the workshop, 61% were able to do so confidently as a result of attending this workshop with a further 28% needing a little help to accomplish the task. Compared to the 63% who reported basic skill at the start of the workshop, 89% expressed confidence in their basic IPv6 capability as a result of attending this workshop.
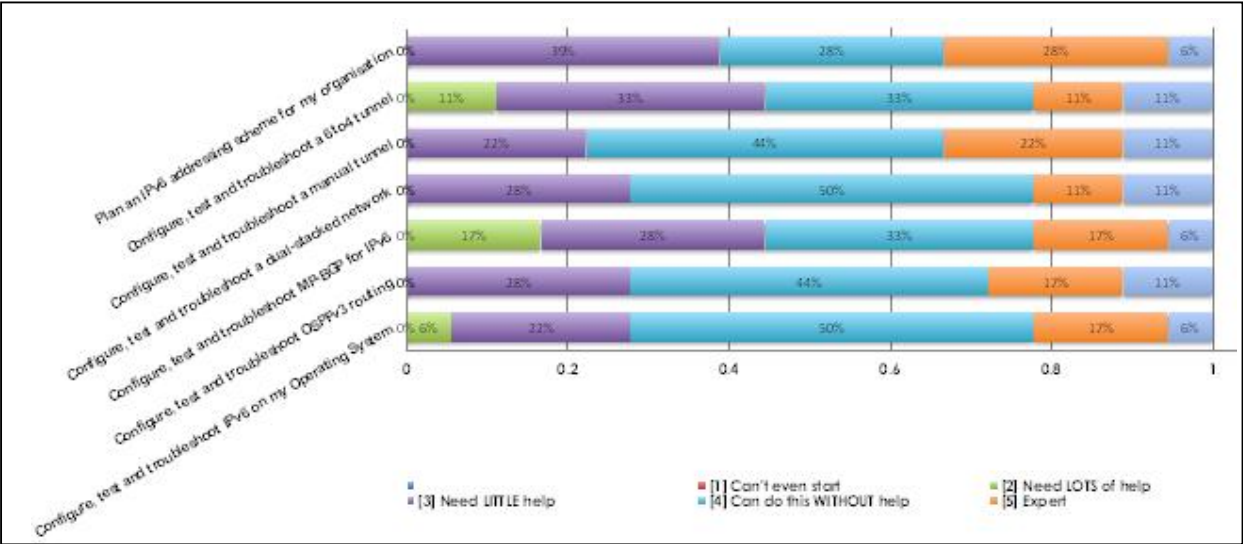

10. How participants learnt about the workshop

85% of the attendees found out about this workshop either through our website or mailing list (45% and 30% respectively) while 15% found out through other sources and 10% found out through non-AfriNIC mailing lists.

(Q13a) www.afrinic.net	9	
(Q13b) Social networks	0	
(Q13c) AfriNIC mailing lists	6	
(Q13d) Non AfriNIC mailing lists	2	
(Q13e) Media advertisement	0	
Other	3	

11.   Other topics participants would have liked to see treated

a) More IPv6 BGP practical sessions.

b) Feedback from returnee participants.

c) IPv6 security issues.

d) More practicals on transition techniques.

12.   General event organisation

The data shows that the event was generally very well organised (At least 70% of all respondents rated "Agree" on three of the four characteristics).
General comments on the event were as follows:

- "This was very fruitful, we recommend more such workshops for upgrading our understanding in various ICT environments."
- "Keep up the good work."
- "Well presentation and lab."
- "Think of training the Francophone community will help a lot."
- "Router for practical should be at the place where the training is conducted so as to reduce the latency of going over the Internet during exercises."
- "Good work. I look forward to the next conference."

6. CONCLUSIONS

Workshops are a key mechanism through which information, knowledge, and know-how are transferred to less experienced countries and participants. The workshops enable us to build constituencies and raise awareness; disseminate, benchmark, and validate the research results from the EU's Framework Programmes; promote European technologies; exchange best practices; and offer information related to standards and interoperability issues.

The 6DEPLOY-2 workshop took place in Dar es Salaam - Tanzania on June 5th and 6th 2011. This Workshop was held as part of the annual AfriNIC/AfNOG annual meeting which brings together IT professionals from all over the continent. AfriNIC led the workshop and Phil Smith of Cisco taught as a guest trainer.

In summary, this workshop should be considered a success with regard to the dissemination of IPv6.
